the **Fantastic** 4

THE CRISIS OF CREDIBILITY

THE CUSTOMER: STUDENTS USING AI FOR ACADEMIC WORK

THEY RELY ON GENERATIVE AI TO LEARN, WRITE AND RESEARCH - BUT CANT SEE WHY THEY SHOULD TRUST WHAT IT SAYS.

UNMET NEED: STUDENTS NEED PEACE OF MIND THAT AI GENERATED CONTENT IS CREDIBLE, TRANSPARENT, AND SOURCE BACKED, SO THEY MAKE ACADEMIC DECISIONS WITH CONFIDENCE.

PROBLEM

- AI SOUNDS CONFIDENT BUT HIDES ITS REASONING
- REPEATED INACCURACIES CREATED CREDIBILITY FATIGUE
- THIS IS AN EMOTIONAL TRUST CRISIS, NOT JUST A TECHNICAL ONE.

FUNCTIONAL

EMOTIONAL

HUMAN

THE PAIN POINT

THE REAL PAIN ISNT INCORRECT ANSWERS- ITS THE LACK OF CLARITY OR TRANSPARENCY ABOUT ITS CREDIBILITY .
STUDENTS CRAVE REASSURANCE, NOT MORE INFORMATION.

INTERVIEW

1

“I USE IT TO GET STARTED- BUT I ALWAYS DOUBLE CHECK EVERYTHING”

2

“I FEEL ANXIOUS SUBMITTING WORK THAT I HAVE CHECKED THOUGH AI BECAUSE I CAN'T TELL IT IT'C CREDIBLE”

3

“IT NEVER TELL ME WHERE THE INFORMATION IS FROM SO I ALWAYS HAVE TO GOOGLE IT MYSELF”

4

“IT FEELS LIKE A SHORTCUT, I AM ALWAYS SCARED IT WILL COST ME MARKS”

5

“IF I DON'T RECHECK IT, I HAVE A GOOD CHANCE THAT I WILL APPEAR UNPREPARED”

6

“MAKES ME EMBARRASED IN FRONT OF MY PEERS, WHEN I NEED SOME INFORMATION FAST AND IT TURN OUT TO BE FAULTY”

EVIDENCE

1

ALTHOUGH STUDENTS HOLD GENERALLY POSITIVE ATTITUDES TOWARD GENAI, THEY ALSO VOICE CONCERNS ABOUT ACCURACY, ETHICAL ISSUES, AND TRANSPARENCY.

Our Solution: The Credibility Dashboard

Making AI Answers Transparent, Traceable, and Trustworthy

Problem

Users feel anxious and betrayed when AI outputs lose credibility — they can't see where answers come from or how confident the AI really is.

Solution

The Credibility Dashboard is an integrated AI companion that gives users peace of mind by displaying confidence scores, source breakdowns, and evolving expert consensus — helping them understand not just what the AI says, but why it says it.

Tapping into the user needs

- **NEED:** "I feel anxious about accuracy..." → **SOLUTION:** Confidence Score & Source Tiering
- **NEED:** "...I don't know where this came from." → **SOLUTION:** Visual Source Breakdown
- **NEED:** "...Is this information up-to-date?" → **SOLUTION:** Consensus Timeline

COMPARING THE TWO SOLUTIONS

CREDIBILITY DASHBOARD

1	Makes AI reasoning transparent through confidence scores, sources, and expert consensus timeline
2	Multi-layered transparency dashboard (confidence + sources + timeline)
3	Trust and assurance in AI answers
4	Transparency and interpretability
5	High—builds on existing AI sourcing and confidence models
6	Peace of mind (“I can trust what I see”)
7	Broad trust gap across all AI users

Core Idea

need solved

Differentiation Focus

Implementation
Feasibility

Emotional Payoff

Market Gap Fit

CREDIBILITY LENS

1	Lets users define what “credible” means (peer-reviewed, industry reports, etc.)
2	User-defined credibility filters
3	Control over credibility standards
4	Personalization and control
5	Medium—requires defining credibility models per user
6	Empowerment (“I define truth”)
7	Narrow but deep niche

POSITIONING STATEMENT

For students and professionals
who worry about whether AI outputs are credible and hate playing fact-checker,
The Credibility Dashboard is an AI transparency and evaluation tool
that makes reasoning, sourcing, and confidence visible at a glance.
Unlike ChatGPT or Gemini, which provide opaque answers without clear traceability,
our product delivers layered indicators, confidence meters, source breakdowns, and
timeline views to reduce doubt and decision anxiety.

PERCEPTUAL MAP

12 June, 2024

DESIGN OVERVIEW

- The **Credibility Dashboard** integrates directly into ChatGPT's interface as a right-side transparency panel.
- Users can click “**View Credibility Details**” below any response to open the Dashboard.
- The panel displays:
 - **Confidence Score (e.g., 92% Credible)**
 - **Source Breakdown (Academic, Industry, Model Knowledge)**
 - **Expert Consensus Meter**
 - **User Feedback Slider**

DESIGN DECISIONS

Design Element	Decision	Rationale
ChatGPT Wrapper UI	Use existing ChatGPT layout (sidebar, chat window, green buttons)	Familiarity increases adoption and trust
Confidence Gauge	Circular 0–100% scale	Gives users an intuitive measure of model certainty
Source Breakdown Chart	Visualize ratio of verified vs. unverified data	Makes credibility easily scannable
Consensus Meter	Displays expert alignment level	Adds interpretive context beyond accuracy
Source Drill-down Cards	Expandable list with reliability tags	Provides transparency without clutter
Feedback Slider	Emoji scale 😞 → 😊	Humanizes trust-building through quick input

HOW IT WORKS?

[Credibility Dashboard Link](#)

End-to-End Flow

- User asks a question — ChatGPT generates an answer as usual.
- User clicks “View Credibility Details” — triggers backend analysis.
- **Credibility Analyzer Service:**
 - Parses GPT’s response.
 - Checks key claims against verified sources (HBR, LinkedIn APIs).
 - Computes confidence % and reliability tags.
- **Dashboard Overlay appears:**
 - Shows Confidence Score, Source Breakdown, and Expert Consensus.
- **User Feedback Loop** — emoji slider ratings feed back to retrain the scoring weights.

Result: GPT becomes a glass-box assistant — transparent, traceable, and trustworthy.

BEHIND THE TECH STACK

Frontend (UI Wrapper)

- ChatGPT-style web interface (React + Next.js + Tailwind).
- “View Credibility Details” button & Dashboard panel built with Chart.js

Middleware (API Layer)

- Python FastAPI or Node.js Express service.
- Connects to OpenAI API for answers + calls Credibility Analyzer microservice.

Backend (Intelligence Layer)

- Credibility Analyzer → NLP pipeline that:
 - runs semantic search / retrieval on trusted sources.
 - assigns reliability scores (academic > industry > model).
- PostgreSQL / Firebase for feedback and score storage.

Core Model: GPT-4 via OpenAI API

(Dashboard is a wrapper, not a new LLM — we layer transparency on top of ChatGPT.)

ROLLOUT

Phase	Focus	Outcome
1. Prototype (M1-M2)	Lovable.ai mockups + Flask API demo	Visual proof of concept
2. Closed Beta (M3-M4)	Deploy to select users via ChatGPT plugin wrapper	Gather UX + trust feedback
3. Public Launch (M5-M6)	Integrate into ChatGPT-like clients or extensions	Wider adoption
4. Continuous Learning (Ongoing)	Use feedback to refine confidence algorithms	Self-improving credibility scores

VALIDATING THE PROBLEM

ACCURACY ISSUES ARE PREVALENT

Generative search tools were often confidently **wrong** in our study

The Tow Center asked eight generative search tools to identify the source article, the publication and URL for 200 excerpts extracted from news articles by 20 publishers. Each square represents the citation behavior of a response.

Constantino, T. , 2025.

EXPERT INSIGHT

“Instead of focusing on trust, we should be **emphasizing the quality, integrity, and accuracy** of the data and output. These are the things that give us a greater sense of trust.”

-Alyssa Blackburn

from *The Association for Intelligent Information Management*

OUR CONSUMER RESEARCH FINDINGS

88%

Surveyed users double-check AI output due to **credibility concerns**

73%

Surveyed users lose trust in AI responses when they can't see **the sources**

Data from Forbes article:
Constantino, Tor. “Can You Trust AI Search? New Study Reveals the Shocking Truth.” Forbes, 28 Mar. 2025,
